EXAMINER'S AMENDMENT

This communication is responsive to Amendment dated 4/4/2006.

Claims 9 and 10 are newly added. Accordingly, claims 1, 3, 5, 7, 9 and 10 are pending for the examination.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Since the title of the invention is not descriptive, a new title is required that is clearly indicative of the invention to which the claims are directed.

The title has been changed to: "Twisted nematic liquid crystal material with certain values for dielectric constant anisotropy, twisted elasticity modulus and refractive index anisotropy."

Allowable Subject Matter

Claims 1, 3, 5, 7, 9 and 10 are allowed.

Reasons for Allowance

Claims 1, 3, 5, 7, 9 and 10 are allowed since there is no prior art of record that teaches or suggests a liquid crystal display element comprising a relationship of various elements as claimed with the specific allowable subject matter cited in the following claims:

Claims 1 and 7:

Art Unit: 2871

- a twisted nematic liquid crystal material used in liquid crystal layer satisfies dielectric constant anisotropy $\Delta\epsilon$ of $0 < \Delta\epsilon < 8$ and twisted elasticity modulus K22 of $K22 > 6.0$ pN when the refractive index anisotropy Δn is $0.16 \leq \Delta n \leq 0.18$.

Claims 3, 5 and 9 are allowed since they depend on allowed claim 1; claim 10 is allowed since it depends on allowed claim 7.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kitahora et al (US 2002/0039167) discloses a liquid crystal composition contains a mixture of a chiral material and nematic liquid crystal satisfies dielectric constant anisotropy $\Delta\epsilon$ of $5 \leq \Delta\epsilon \leq 50$, the refractive index anisotropy Δn of $0.15 \leq \Delta n \leq 0.23$. However, Kitahora et al lacks disclosure of the twisted elasticity modulus of the liquid crystal composition.

Tanaka et al (US 2003/0151710) discloses an optically self-compensated birefringence (OCB) mode having a twisted elasticity modulus $K22 < 10$ pN. Tanaka et al teaches away from using a twisted nematic mode with slow response and narrow viewing angle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
